

CAMPALANS COMMITMENT WITH ENVIRONMENT

Campalans, despite not having the ISO-14001 certification, has always been very aware that the environment is the best asset to preserve, in order to have a higher quality of life, for the future of humanity as well as for the preservation of life on our planet.

It is for this reason that Campalans has always had a special sensitivity and responsibility towards all those aspects of our business that may affect the environment.

We also understand that whatever benefits the environment, it also benefits and improves our work environment, contributing to a greater satisfaction about the work we are carrying out.

Hereafter we list some aspects that we have been performing for years in order to make an ecofriendly manufacturing and work environment:

- Filtering all cutting oils, for higher quality and duration thereof, thus facilitating its reuse and minimizing waste generation.
- Processing of metal waste (scrap) for waste reduction and improving the scrap quality for subsequent reprocessing.
- Reuse of water, used for cooling certain machines for other manufacturing needs.
Reducing water consumption and quantity discharged into the sewage system.
- Verification checks of the water discharged to the sewerage system, in order to meet the legal requirements
- "0" emissions of toxic products to the atmosphere. We do not have combustion emissions, and all machines that could be harmful for emissions to the atmosphere, are working completely sealed to ensure the 'health' environment and people who work with them.

- We select and properly manage waste paper, cardboard, wood, electronics devices, fluorescent, etc.
- All waste (oil, oiled rags, sludge, etc.) are properly managed with specialized and duly authorized companies, such as "waste managers" by the competent institutions of the Spanish State and "Generalitat de Catalunya" (regional government).
- Compliance with environmental matters obligations, specified by the Spanish government and 'Generalitat de Catalunya', following EU guidelines.
- We put special emphasis on making intelligent management of all products that may eventually generate some kind of residue, or the consumption of certain natural resources (paper, water, etc.)

Therefore, even that we do not have ISO-14001 certification, we have always acted with the utmost respect for the environment that, as we understand, is the future of our welfare.
